RE: Solar – Made in Ohio Support

To Whom It May Concern:

I have used Nextronex Inverters on several of our solar installations to date and continue to be happy with their products and services. Nextronex Inverters have a cutting edge technology that allows them to integrate very nicely with the proper solar producing technology for a climate like what we have in Ohio.

Nextronex is a great asset to Ohio. I would strongly urge others to take note of their cutting edge technology and use their systems on solar installations here in Ohio. By having a home grown Ohio company with this technology allows Ohio to employ fellow Ohioans and keep our workers working.

It is the right thing to give “preferred” preference to Ohio based companies for Ohio built projects. This will add to valuable manufacturing backbone that Ohio and much of the rest of the country’s wealth was based on. It will add to Ohio’s energy independence. I strongly endorse using Nextronex and their technological advantages on a solar installation.

Sincerely,

Jason Slattery  
Solar Team Leader
